

Expertise on glasses, ceramics, polymers

Defects detection

Type of defects detected

Cracking
 Matter inclusion
 Porosity, Delamination
 Imperfection in Volume

Defect Detection
and Sizing

Methods

Surface ultrasonic testing
Penetrant testing

Volume ultrasonic testing
 (50 kHz to 15 MHz)
US tomography

Terahertz Imaging

Structural analysis by AND methods

Measurable values

Mechanical characteristics

- ☐ Young's mechanical modulus E, shear G, density
- ☐ Applied stresses, strains

Structural and physical characteristics

- ☐ Information on the structure
- ☐ Moisture rate,

Plastics analysis (injection)

Methods

Ultrasonic testing

Térahertz Imaging
